

# WEB APPLICATION DEVELOPMENT

**INSTRUCTOR:**

**STUDENT NAME**

**Ngô Quang Hải**

**STUDENT ID**

**ITCSIU22276**

## LAB 5

Notices:

Pom.xml is rewritten!

Basically, these homework made the project to use servlet and let DAO handle the backend and server connection, Controller to handle request, response and forward to jsp files.

All jsp files in in WEB-INF/views/

So the visual studio code require specific version to run, let me paste them:

```
<dependencies>

    <!-- JUnit -->
    <dependency>
        <groupId>junit</groupId>
        <artifactId>junit</artifactId>
        <version>4.13.2</version>
        <scope>test</scope>
    </dependency>

    <!-- SQL Server JDBC driver (Java 11+ version) -->
    <dependency>
        <groupId>com.microsoft.sqlserver</groupId>
        <artifactId>mssql-jdbc</artifactId>
        <version>12.6.1.jre11</version>
    </dependency>

    <!-- Tomcat 11 uses Jakarta Servlet 6.0 -->
```

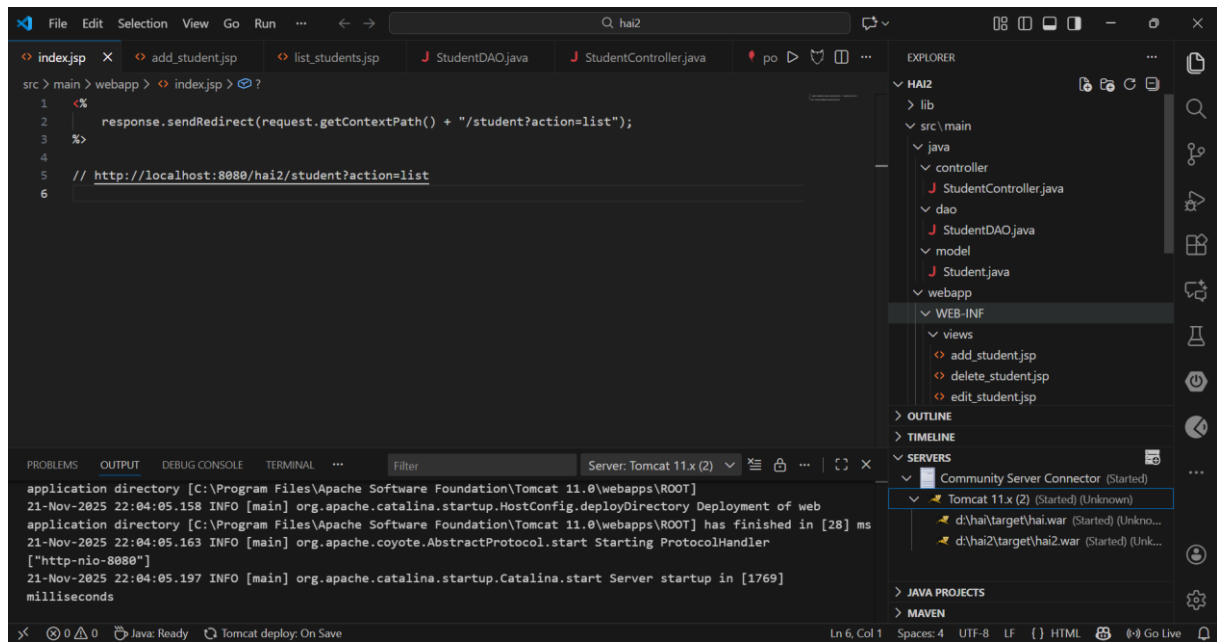

```

<dependency>
  <groupId>jakarta.servlet</groupId>
  <artifactId>jakarta.servlet-api</artifactId>
  <version>6.0.0</version>
  <scope>provided</scope>
</dependency>

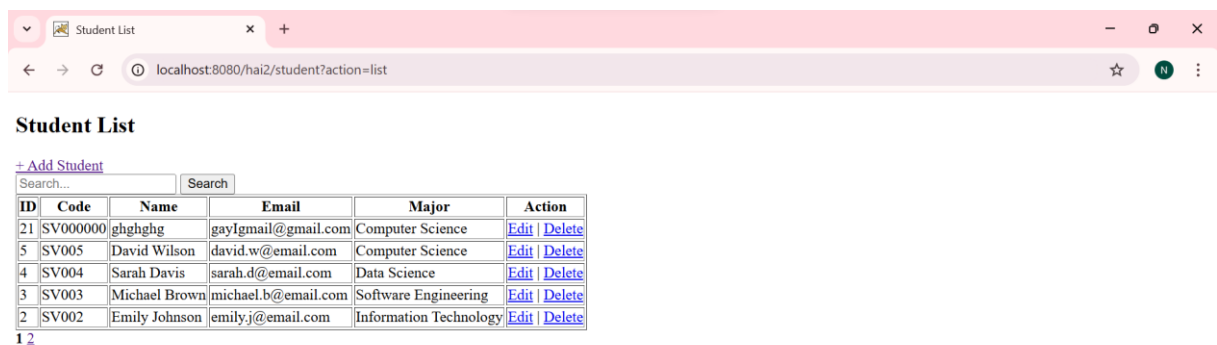

</dependencies>

```
